

# MEZZANINE SAFETI-GATES, INC.

An OPEN and SHUT Case for Plant Mezzanine Safety

## HIGH PALLET PIVOT GATE MODEL

The High Pallet Pivot Safety Gate from Mezzanine Safeti-Gates is a dual-gate system that allows materials of up to 80 inches in height to be easily and safely loaded and off-loaded from mezzanine ledges. These safety gates accommodate loads 26 inches taller than the standard pivot model. The High Pallet Pivot gates create a totally enclosed workstation that prevents exposure to pallet-drop ledges, significantly reducing accidents associated with multi-level material handling operations.

The economical High Pallet Pivot Safety Gate has 14 pivot points that allow the counterbalanced gates to be easily moved over most pallets and loads. The gate consists of two permanently fixed stanchions anchored to the mezzanine ledge, forming a single piece when mounted to the pivot arms. When the rear gate is lifted up, the ledge gate closes automatically, creating a fixed 42-inch tall barrier that extends to the floor.

Pre-engineered units have counterbalanced gates and welded stanchions to maintain structural integrity. All High Pallet Pivot gates meet or exceed OSHA requirements and are designed for use with standard GMA pallets. Single-wide or double-wide units can be ordered. Gates can be custom designed to accommodate various widths.

The High Pallet Pivot Safety Gates are available in painted steel, stainless steel or aluminum, making them ideal for use in hostile environments, such as chemical plants or food manufacturing. Because the gates have few moving parts, stainless steel models can also withstand hot and cold climates, freezer applications and frequent rinsing.

Many companies are using the High Pallet Pivot gate, including: 3M, Iron Mountain, Coca-Cola, Office Depot, Sysco, M&M Mars/Masterfoods, Disney and Cardinal Health. See our separate case study on the Cardinal Health application for more details on how the High Pallet Pivot units are being used in a distribution center environment.
