Open Top Safety Gate

The Open Top safety gate is designed for applications that feature tall pallet loads or integration with overhead devices, like vacuum hoists or cranes. The Open Top safety gate uses dual, counter-balanced gates that are interconnected on the side to maintain a safe pallet drop area at all times without load-height restrictions.

Ideal for applications within chemical companies or food processing plants, the Open Top gate creates safe environments for workers in pallet drop areas in which overhead cranes or vacuum hoists are used to load bags or super sacks to elevated levels. The gate can be designed to open to either the left or right side to accommodate material being passed straight through the area or configured for 90-degree access.

THE SERIES

G

OPEN TOP SAFETY
GATE FEATURES:

- No overhead mechanics
- Accommodates extremely tall pallet loads
- Allows access for overhead cranes and hoists
- Powder coated or stainless steel
- Manual or power operation
- Easy, ergonomic operation
- Meets or exceeds OSHA, ANSI and IBC standards

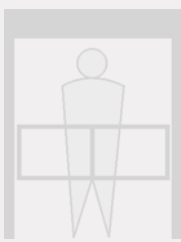

The gates are counterbalanced with heavy-duty torque shafts and gears to provide a smooth manual operation that requires little effort. The gates are interconnected so one gate is always in place, protecting the operator from the hazards of an elevated platform. When the ledge-side gate is open, allowing material to be delivered to the platform, the rear-side gate is closed, protecting the worker from falling off the ledge. When the rear-side gate is raised to gain access to the pallet, the ledge-side gate closes, maintaining a safe environment during all stages of the operation.

Available in powder-coated mild steel or electro-polished stainless steel, the Open Top safety gates come in standard sizes or can be customized to fit specific applications.

Open Top Safety Gate	Drop Area Width	Drop Area Depth	Clearance Height	Overall Width	Overall Depth	Overall Height
	60"	62"	N/A"	84"	64"	86"

Custom sizes and configurations can be engineered to meet your specific needs
