

MEZZANINE SAFETI-GATES, INC. OFFERS NEW STOP AND GO LIGHT FEATURE FOR SAFETY GATE MODELS

Lights Provide Added 'Operator-Assist' Safety in Forklift and AGV Loading Procedures in Pallet Drop Areas

ESSEX, MA — June 11, 2024 — Mezzanine Safeti-Gates, Inc., an innovator in the design and manufacturing of pallet drop safety gates that provide fall protection in distribution centers, warehouses and manufacturing and material handling facilities, announced today, National Forklift Safety Day, a new offering of a sensor-based Stop and Go light option for its pallet drop safety gate designs. The red and green light system provides an easy system for forklift operations to know when the drop area is ready for loading, as well as if the load is correctly in place in the pallet drop area, preventing pallets from being pushed too far into the drop area.

The new mezzanine safety gate light system provides notification to the forklift truck drivers; when the light is green, the ledge-side gate is open and the pallet drop area is ready to be loaded. As the forklift truck driver loads pallets into place, the light turns red when the pallet has been positioned correctly, signaling not to push the pallet back further. The ledge gate closes, creating a fall protection barrier for the employees working with the pallet. The light stays red until the pallet drop area has been unloaded.

“Fork-lift trucks are one of the most widely used vehicles to load and unload pallet drop areas, no matter the application,” said Aaron Conway, president, Mezzanine Safeti-Gates, Inc. “When elevated pallet drop areas are being loaded, lift truck operators don’t often have a direct line of sight to the drop area, which can cause issues, such as pallets to be pushed too far back into the area. Any time we can provide ‘operator-assist’ enhancements for lift-truck drivers, such as the stop and go light notifications, it can help the overall facility safety. .”

All of the pallet drop safety gates manufactured by Mezzanine Safeti-Gates come in standard single-wide and double-wide sizes. Additionally, the gates can be manufactured in stainless steel or powder-coated steel and finished in any color. Custom engineering can be obtained for standard designs with uncommon pallet drop area sizes or for completely new safety system designs.

Used in thousands of locations throughout the world, pallet drop safety gate systems offered by Mezzanine Safeti-Gates can be equipped with additional forklift truck ‘operator-assist’ technologies including power, remote operation and radio frequency sensors. About Mezzanine Safeti-Gates, Inc.

Headquartered in Essex, Mass, Mezzanine Safeti-Gates is an innovator in the design and manufacturing of safety gate systems for material handling, warehousing and manufacturing operations. In business for over 40 years, the company designed the first dual-gate pallet drop safety system, the Roly® mezzanine safety gate, which has been installed in thousands of

facilities across the world. The company offers a full line of pallet gates, designs for loading docks, dock-lifts and custom-engineered solutions. All gates in the company's product suite can be customized to meet specific facility requirements and meet OSHA, ANSI, IBC and CCOHS fall protection standards. A member of MHI's ProGMA and MHEDA, the company can be reached via telephone at 978.768.3000, email at sales@MezzGate.com or on the web at <https://www.MezzGate.com>.
