PIVOT SAFETY GATE NOW AVAILABLE IN A RACK-SUPPORTED DESIGN

Mezzanine Safeti-Gates, Inc. Adds Former Custom Design to its Growing Product Line

November 20, 2017 - Essex, MA -- Mezzanine Safeti-Gates, Inc., an innovator in the design and manufacturing of industrial safety products for warehouses, distribution centers and manufacturing facilities, today announced the popular Pivot safety gate model is now available in a Rack Supported design. The Rack Supported Pivot safety gate secures pallet drop areas in rack-supported pick modules for picking positions and empty pallet or tote return bays.

The Rack Supported Pivot safety gate has few moving parts and includes a hydraulic damper for easy, ergonomic operation. The design attaches directly to the rack uprights in the module, which maximizes space in the bay and creates a secure connection that does not require anchoring the gate to the decking. The safety gates fit any manufacturer's rack configuration, and come in standard single and double-wide sizes. The Rack Supported Pivot gate can also be custom designed to fit any pallet load size.

"Our engineering team has created many Rack Supported Pivot safety gates for customers over the past years, and given the interest in this model, we've now made this a standard design in our product line," said Aaron Conway, president of Mezzanine Safeti-Gates, Inc. "With few moving parts, the pivot model is also a very economical choice for customers that use rack supported pick modules."

The dual-gate system keeps employees working on upper levels of pick modules safe. When the ledge-side gate is up, the rear-side gate blocks employees from the ledge. When the rear-side gate is raised so employees can pick from the pallets, the ledge-side gate is closed, making a barrier and protecting employees from falling from the ledge.

In addition to the Pivot gate, the company also offers its Roly® and Tri-Side designs in Rack Supported models. To learn more about the Rack Supported Pivot safety gate design or the full line of dual-gate safety systems from Mezzanine Safeti-Gates, visit <http://www.mezzgate.com>.
