ROLY® SAFETY GATE WITH PRODUCT CONTAINMENT

Now people and products can be protected with one safety gate system. The Roly® pallet drop safety gate with product containment netting protects employees working on elevated pallet drop areas, ensuring the ledge is always guarded. In addition, the netting on the ledge gate contains products, preventing them from falling and striking employees or equipment below.

When the pallet drop area is being loaded, the ledge gate is open and the netting compacts into the system, clearing the way for pallets to be moved into place. After loading is finished and the pallet area is ready for picking, the ledge gate closes and the netting extends from the deck to the top frame of the gate, providing full length coverage to prevent products from falling, decreasing the risk of damage while being picked or moved from the area.

Ideal safety gate for:

Pallet drop areas with unwrapped loads

Pallet rack storage systems

Picking areas accessed by pallet jacks

- Protects employees, products and equipment from being injured or damaged in falls
- Keeps hands out of the loading zone
- Contains material two inches (2") or larger
- Power or manual operation
- Option on all pallet drop safety gate designs
- Meet OSHA and ANSI standards for fall protection
- Available in powder coated mild or electro-polished stainless steel
- Visit MezzGate.com for more information
